

Backend Engineer (Python, HealthTech Platform, Build from Scratch)

ScaleUp

Vast

130k

ABOUT THE COMPANY

This healthtech scale-up is growing rapidly and already serves thousands of users across Europe. The next step is rebuilding their current setup into a scalable in-house platform.

Right now, systems are fragmented. Your job is to help turn that into a solid, scalable backend.

ROLE OVERVIEW

This is a foundational engineering role. You'll be one of the first backend engineers shaping architecture, making technical decisions, and building core systems from the ground up.

What you'll do

- Build backend services in Python (FastAPI)
 - Design system architecture and core backend structure
 - Set up scalable foundations for future growth
 - Define how different systems interact
 - Work closely with product and leadership on technical direction
-

REQUIREMENTS

- Strong experience with Python in production
- Experience building systems from scratch or early-stage platforms
- Solid understanding of system design and architecture
- Experience with cloud (GCP, AWS or Azure)
- Comfortable working in a fast-moving, less structured environment
- **Nice to have**
- Experience in startups or scale-ups
- Experience with FastAPI
- Experience designing scalable architectures

WHAT'S OFFERED

- Salary between €7,000 - €10,000 per month
- High ownership and impact on core systems
- Opportunity to build a platform from the ground up
- Hybrid setup (1-2 days in the office, Rotterdam area)
